Key Insights :

- * phones and laptops are the top performing products in both sales and profit.
- * chairs, tables and sofas generate decent sales volume but remain loss-making due to high discounts and shipping costs.
- * sales and profit show a declining trend from january to march, indicating possible seasonal demand reduction.
- * higher discounts percentages negatively impact profit margins. maximum sales and profit were observed around a 10% discount range.
- * the west region generates the highest sales and profit, mainly driven by strong technology product sales. the south region has the lowest profit due to higher contribution from low-margin furniture products.

Recommendation :

- * Increase investment on marketing, product quality and inventory for high-performing technology products
- * Maintain discount rates within the 10%-15% range to balance sales growth and profitability.
- * Prioritize expansion and targeted campaigns in the west region due to strong performance.
- * Reduce shipping costs and excessive discount on furniture products to improve profitability.
- * Analyze customer demand, seasonally and marketing effectiveness to address declining Q1 sales trends.
